

POSITION AVAILABLE

RESERVES MANAGER

DALLAS, TEXAS

JOB DESCRIPTION

Responsible for determining corporate reserves, as well as economic analyses of exploration, development and acquisition opportunities. This position offers an outstanding opportunity to have a significant role in the growth of an independent E&P company.

JOB REQUIREMENTS

- Bachelor of Science Degree in Petroleum Engineering, with Masters degree in Petroleum Engineering preferred
- Minimum of ten years industry experience with unconventional (low permeability) oil and gas reservoirs, particularly tight sands and shales, within the following areas: Permian (Delaware) Basin, South Texas (Eagle Ford) and East Texas/North Louisiana (Cotton Valley/Haynesville)
- Registered professional engineer and certified in reserves determination for public company under SEC regulations
- Ability to predict reserves/production profiles and perform economic evaluation of exploration and development drilling projects, acquisitions and divestitures
- Strong background in reservoir fluid flow and reservoir modeling
- Experience with production/nodal and pressure transient analysis to optimize production
- Knowledge of well completions and stimulation methods
- Petrophysical (open hole log and advanced core analysis) skills are a plus
- Strong interpersonal skills with the ability and desire to work within a multi-disciplinary team, as well as with other technical, financial or investor groups outside the company
- Excellent presentation and communication skills
- Independent, self-motivated, creative and results oriented

JOB BENEFITS

Compensation includes industry competitive salary commensurate with experience, performance incentives, plus medical and dental benefits, 401(k), etc. Details are available upon application.
